

Download Safety Management Manual

2-2 Safety Management Manual (SMM) is certainly desirable, they are unachievable goals in open and dynamic operational contexts. Hazards are integral components of aviation operational contexts. Failures and operational errors will occur in aviation, in spite of the best and most accomplished efforts to prevent them. What is a Safety Management System (SMS)? SMS is the formal, top-down, organization-wide approach to managing safety risk and assuring the effectiveness of safety risk controls. It includes systematic procedures, practices, and policies for the management of safety risk. The 4th edition of the Safety Management Manual (SMM) (Doc 9859) contains two parts; the first part is an ICAO Manual related to safety management fundamentals and concepts which will be complemented by an enhanced website with examples and best practices to support SSP and SMS implementation by States and service providers, respectively, as well as to support the use of proactive approaches for the management of safety. Our Aviation Safety Management System Manual is an excellent alternative to our Flight/Company Operations Manual for operators who either already have an existing operations manual or who need more basic and direct SMS procedures. In either case, we will provide the necessary forms and tools to help you implement an SMS, as well as the training needed to ensure everyone is knowledgeable about the new procedures.
